

Practice in University of Umea 1.10.2011-30.11.2011

Larisa Mayorova, PhD student of IHNA

At the end of my first year of Ph.D. study I was lucky to practice in UFBI group during two months in fall of 2011. From the first day of my being there I was strongly impressed by organization of lab working, the warm atmosphere and the competent people surrounding me and who were always ready to help and to answer all my questions, from the simplest to the most difficult. My main aim was to learn how to deal with fMRI data correctly, but I got a lot more. Regarding to prompting of Michael Andersson and Alireza Salami I gained clear understanding of principles of fMRI data processing and was able to handle my own data by myself, also I got many practical guidelines from them about experiment holding.

Regarding to Johan Eriksson, who kindly gave me a lot of useful advice and theoretical knowledge, I got interesting ideas from discussions and, what is the most important, the approach to solving the problems, which I'm sure I will face with in future.

Now I successfully share this experience with my Russian colleagues.
